Summary

Engineering and Management master's student with practical experience in logistics, inventory management, and material planning. Familiar with SAP ERP, WMS, and lean methods, and keen to grow in a supply chain or logistics role.

Experience

Working student in the Logistics Department September 2025 - Present
POCO Einrichtungsmaerkte GmbH, Munich, Germany

- Coordinating daily inbound and outbound shipments, preparing orders and verifying contents against purchase orders in the Warehouse Management System (WMS).
- Managing inventory placement across 1,000+ SKUs using 5S methodologies, optimizing space utilization and improving picking efficiency, which directly contributed to achieving zero inventory defects.
- Inventory management and shipment tracking using ERP and WMS.
- Managing the discrepancy reporting process for inbound logistics, including the documentation of damaged parts and incorrect delivery quantities to maintain 100% data accuracy.
- Collaborating cross-functionally with warehouse, logistics, and customer service teams to reduce discrepancies and cycle times.

Trainee Engineer in Research and Development Department August 2022 - January 2023
Crompton Greaves Power and Industrial Solutions Limited, Nashik, India

- Reduced part count through design consolidation, directly lowering material costs and simplifying procurement complexity.
- Created a standardized parts library, reducing SKU proliferation and supporting inventory rationalization across assemblies.
- Executed material planning using SAP ERP (R/3) and coordinated with procurement and logistics teams to ensure on-time delivery of components.
- Collaborated cross-functionally with design, procurement, and logistics teams to align production requirements with supply availability.

Intern in Production Planning, Control, and SCM Department November 2021 - May 2022
Bosch, Nashik, India

- Tracked production KPIs and supported continuous improvement and process optimization projects in production areas.
- Utilized SAP ERP software (R/3) for inventory tracking to support process optimization.
- Created Value Stream Map (VSM) to analyze production workflow, identify bottlenecks, and support root cause analysis of inefficiencies.
- Standardized FIFO and inventory levels to reduce non-value-added time and lead time, contributing to improved OEE.
- Applied Kaizen principles to visualize and manage inventory levels, and implemented 5S to standardize workspace organization and reduce search time.
- Applied GEMBA principles to identify hidden waste through root cause analysis on the shop floor.
- Collaborated cross-functionally with production, quality, and logistics teams; used in-house Scrum software for Project Management.

Education

Master: Engineering and Management October 2023 - January 2027
Technische Hochschule Ingolstadt, Ingolstadt, Germany
Majors: Supply Chain Management, Logistics, Production Systems, Lean Manufacturing

Bachelor of Technology: Mechanical Engineering August 2019 - May 2022
MIT World Peace University, Pune, India
Majors: Industrial Engineering, Production Systems, 2D & 3D Modeling (Autodesk Suite)

Skills

Technical Skills

- SAP ERP (S/4HANA, R/3)
- Jira (Project Management)
- MS Office (Excel, Word, PowerPoint, Outlook, Teams)
- Lean Six Sigma White Belt Certified (DMAIC methodology)

Languages

- German - B1 (Intermediate)
- English - C1 (Fluent)
- Marathi, Hindi - Native

Soft Skills

- Proactive and Structured working style
- Intercultural Communication & Reliability
- Collaborative & Team-oriented
- High attention to detail

Projects

Master Thesis: June 2026 - January 2027
Feasibility of implementing a deposit refund system in India: Lessons from Germany's Pfand model

Research project: Sustainable Practices of Air Freight Transport April 2025 - July 2025
Transport Logistic Exhibition 2025, Munich, Germany

- Executed a study analyzing air freight sustainability maturity across multiple international airlines, freight forwarders, and ground handlers at the Transport Logistic Exhibition 2025.
- Evaluated technologies including Sustainable Aviation Fuel (SAF), optimized routing, and fleet electrification using a Triple Bottom Line framework; identified cost barriers and regulatory drivers shaping adoption.

Bachelor Thesis: Lean Organization implementation in the Value Stream November 2021 - May 2022
Bosch, Nashik, India

- Contributed to a team project that achieved savings of INR 8 million by reducing inventory through standardized FIFO and 5S implementation.
- Optimized consumption control through Kaizen visualization techniques.

Co-curricular

SAP Business Network Supply Chain Collaboration August 2026 - Present
SAP Learning

- Comprehensive digital supply chain training covering procurement, supplier inventory management, and much more.
- Gaining hands-on familiarity with automated B2B workflows, and end-to-end order execution within the SAP Ariba network.

Industrial Field Visit – Beverage Packaging & Recycling Systems June 2025
Krones AG, Regensburg, Germany (via Technische Hochschule Ingolstadt)

- Completed a guided industrial plant tour analyzing end-to-end bottle manufacturing, high-volume automation, and sustainable packaging machinery processes.
- Evaluated industrial recycling infrastructure and closed-loop deposit refund (*Pfand*) system strategies applied in large-scale production facilities.

Lean Leadership Training December 2023
Audi Akademie, Ingolstadt, Germany

- Hands-on program with a live production simulation applying Toyota Way principles: waste elimination, Value Stream Mapping, and process redesign, alongside team-based problem-solving.
